

Skin Tyte After Care Instructions

- ◆ The SkinTyte procedure is generally considered by most people to be 'near' painless, with no pain or discomfort post-treatment being reported. A warm sensation or feeling of heat has been reported during treatment, but due to the nature of this type of treatment there are no specific requirements post-treatment. All normal activities can be resumed immediately and makeup may be applied immediately.
- ◆ Although some people notice an immediate change following treatments, the results are seen gradually over a period of 1–3 months as new collagen is formed and the skin tightens further.
- ◆ If you are predisposed to Herpes Simplex virus infections, a breakout around the treated area could occur following a treatment.
- ◆ There is a rare possibility that you could experience temporary pain (for up to 1 week) in muscles under the treated area.
- ◆ Mild swelling and redness following a treatment may occur. This may last up to 24 hours, but will usually resolve after 1 - 2 hours.
- ◆ Call Yolo Med Spa at 203-533-4560 with any questions or concerns you may have after the treatment
